                                                                                                                                                                                                                                                                                                                                                     The present sequence encodes Vernonia galamenensis fatty acid desaturase. The present invention also describes: (i) Vernonia galamenensis fatty acid epoxidising enzyme; (ii) chimeric genes comprising the fragments linked to regulatory sequences; and (iii) transformed host cells containing the chimeric genes. The DNA's from the present invention can be used to alter levels of expression of the enzymes in transformed host cells or to produce the recombinant enzymes by transformation of microbial host cells. (Updated on 27-AUG-2003 to correct OS field.)

                                                                                                                                                                                                                                                                                                                                                                                                                             including castor (Ricinus communis) and the crucifer Lesquerella fendleri. Ricinoleic acid is synthesised by hydroxylation of oleic acid by fatty acyl hydroxylateses (FAHS) which have similar enzymatic properties and which exhibit a high degree of homology to fatty acyl desaturases (FADS). This indicates that FADs and FAHS are evolutionarily related. Seven mutations (A63V, A104G, T148N, Y217F, A295V, S32A and M324I) in the Arabidopsis thaliana FAD2 protein conferred FAH activity upon the mutant FAD protein (AAY50098). Most plant species that are grown for production of oils do not produce significant amounts of hydroxylated fatty acids. Transgenic plants (particularly temperate oilseed crops) that contain mutant FAD or FAH may be used to produce oils, waxes and other fatty acid-based products with altered fatty acid composition. A particular use is increasing content of ricinoleic acid, used in production of lubricants and some forms of nylon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents Arabidopsis thaliana wild-type fatty acyl desaturase FAD2 cDNA. All plants contain one or more fatty acyl desaturases which catalyses the O2-dependent insertion of a double bond between carbons 12 and 13 of lipid-linked oleic acid (18:1) to produce linoleic acid (18:2). By contrast only 14 species in ten plant families have so far been found to accumulate the structurally related hydroxy fatty acid, ricinoleic acid (D-12-hydroxyoctadec-cis-9-enoic acid),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WO9953073-A2

```
The gene corresp. to AAQ66068 was isolated by screening Arabidopsis genomic DNA library using radiolabeled pSF2b cDNA insert, purifying positively-hybridising plaque, and subcloning a 6kb Hind III insert fragment from the phage DNA in pBluescript vector. Comparison of the sequences of the gene (AAQ66074) and the cDNA (AAQ66068) revealed the presence of a single intron of 1134 bp at a posn. between nucleotides 88 and 89 or the cDNA, which is 4 nucleotides 5' to the initiation codon. The cDNA is contained in clone AAP92103. Plasmid AAP92103 was deposited on October 16, 1992 with the ATCC and bears accession number ATCC 69095. An isolated nucleic acid fragment where in the nucleic acid identity is 90% or greater to AAQ66068 or AAQ66074 is claimed. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2520
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2460
```

New nucleic acid encoding delta-12 desaturase, delta-12 hydroxylase, or delta-12 fatty acid hydroxylase for creating transgenic plants and producing seed oil with altered levels of unsaturated fatty acids.

Claim 1; Col 99-102; 54pp; English.

CC comprising a sequence encoding a plant enzyme that is a delita-12 cc comprising a sequence encoding a plant enzyme that is a delita-12 cc comprising nucleic acids of the invention are used to cc chimeric genes comprising nucleic acids of the invention are used to cc reate transgenic plants with altered levels of unsaturated fatty acids, and can modify plant lipid composition. Nucleic acids of the invention cc can be used as hybridisation probes to isolate or amplify nucleotide sequences encoding other fatty acid desaturases or fatty acid desaturase. They can also be used in restriction fragment length collymorphism (RFLP) breeding to obtain altered levels of oleic acids in collymorphism (RFLP) breeding to obtain altered levels of oleic acids in collidate oil of oil producing plant species. They can also be used to produce seed oil containing altered levels of unsaturated fatty acids. Nucleic caids of the invention can combine the high oleate trait of transformed cc seeds with mutations for altered fatty acid compositions to obtain new fatty acid compositions and/or improved agronomy. A vegetable oil low in contain sequence in the benefits to consumers (reduced risk of coronary heart disease) as creptesents a cress genomic fragment containing microsomal delta-12 cheafthy acid containing microsomal delta-12 represents a cress genomic desaturase gene to an isolated nucleic acid fragment encoding õ

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DB
